TORPEDO REMOTE FOR PC AND MAC

1. Download the [Two notes Torpedo remote application](#)

2. Launch the Torpedo remote application.

3. Connect your Airwave amp to computer via the USB-C jack located on the back panel

4. Once Torpedo Remote is launched and the Airwave is connected, you will be prompted to register the unit to your account or use it as a Guest (we advise registering the unit in order to receive 6 additional cabinets when you register the Airwave to your account. *The additional 6 free cabinets are only available for the first-hand owner of the Airwave. Once the unit has been registered to an account, it is not possible to redeem the 6 free cabinets in another account (if you are a second-hand owner for example).* When you are in Guest mode you cannot import cabinets from your personal Two notes license to the Airwave. You also cannot remove cabinets from the Airwave.

5. Login to the software

TORPEDO REMOTE FOR iOS AND ANDROID BLUETOOTH PAIRING

iOS & Android:

1. Install the [Torpedo Remote from the Two notes website](#)
2. Pair the amp via Bluetooth using the serial number found on the back of the amp

The pin code for bluetooth pairing is the final six numbers of your Airwave's serial number.
(For example: if your serial number is IC2503000010 your pin code is 000010)

- The connection window should show up, follow the on screen instructions.
- Input the pin code to pair the Airwave and your mobile device.

You will connect to the Airwave from your mobile device via Bluetooth. The connection has to be done in the following order:

- Launch the Torpedo Wireless Remote app
- Accept all the requested authorizations (they epend on your tablet or phone)

TROUBLESHOOTING:
If after inputting the pin code the Airwave does not show up in the "Devices" menu in Torpedo Wireless Remote, you

will need to unpair the Airwave in the list of devices that are paired in the Bluetooth menu of your phone. Once you have done this, please redo the procedure detailed above. You cannot pair the Airwave from the phone or tablet OS, it has to be done by Torpedo Wireless Remote. Some phones need to have the Location (GPS) activated to allow for Bluetooth pairing. Try activating the Location if you find yourself unable to pair with just the Bluetooth activated on your phone or tablet.
